Course Syllabus

**Description of topics:** The course begins by asking how are exchange rates and financial markets related – by arbitrage and by equilibrium pricing relationships, and how can foreign exchange risk be hedged. Then the focus shifts to longer-term issues of international corporate finance. Key corporate financial issues are explored including exchange rate exposure, securities pricing, sovereign risk, the cost of capital, taxation, and the evaluation of foreign projects.

**Prerequisites:** A thorough knowledge of FNCE 611/100 (Corporate Finance) is assumed.

**Reading material:** Cases and readings as well as class charts are available on Study.net.

**Text:** Class notes prepared by Prof. Karen Lewis provide an invaluable introduction to many of the topics in the course. These class notes are available on Canvas. There is no textbook in the course. For later topics in the course not covered by Prof. Lewis’s notes, there are chapters taken from textbooks included in the Study.net readings.

**Cases:** There are three cases, one sovereign risk project, and four problem sets/exercises that will be discussed in class. Students must form case study groups of 3 to 5 students to prepare the cases and other assignments. All team members are responsible for these assignments. *Every student in the group must retain a copy of the write-up and bring it to the class where the case or problem set is discussed. Assignments are due at the beginning of class.*

**Grading:** You must submit write-ups for the case studies, the sovereign risk project and one of the problem sets. The exams are mandatory. The final grade will be awarded as follows:

- Exams: 60%
- Cases, projects and problem sets: 30%
- Class participation: 10% (including discussion of cases and other assignments)

A numerical weighted average will be computed.
Important Notice: There will be two mid-term exams on the following dates:

   Wednesday, October 17th (in class)
   Wednesday, November 28th (in class)

Please make a note of these dates. There will be no specific makeup exams for these exams. If either exam is missed, it is necessary to take a makeup exam covering the entire course to be given at the beginning of the spring term. There will not be a final exam in the course.

Exam policy:
In the exams, students will be allowed to bring in a one-page “formula sheet”. Calculators will also be needed. Exams may (almost surely will) contain questions regarding cases. There will be a review session on the Monday night before each exam at 6 p.m.

Course Topics

Note: For dates of each class and due dates for assignments, see the course schedule.

FIRST HALF

Classes 1-3. Short-run exchange rate behavior: interest parity and expectations

   Notes by Prof. Karen Lewis (Lewis notes), Section I, “Introduction to Foreign Exchange and Eurocurrency Markets”
   Lewis notes, Section II, “Forward Hedging and Interest Parity”

   Assignments (see schedule distributed in class and posted on Canvas):
   Problem set on Arbitrage (due Wednesday, September 12)
   Problem set on Expectations (does not have to be submitted)

Classes 4 and 5: Hedging I: Hedging with Forwards and Options

   Lewis notes, Section III, “Hedging Part 1: Foreign Exchange Options” (Part B only)

   Assignments: Problem set on Hedging I (due Wednesday, September 26th)

   Case 1: Triple Net Inc. (due Wednesday, October 3rd)
